FOP Recipe to render precise Pdf using jsReport

jsReport recipe Fop allows you to create very precise pdf layouts using Apache™ FOP (Formatting Objects Processor). The goal is that template can use all the jsReport features like templating tags, helpers or extensions to assemble final FO xml that is afterwards transformed into pdf using Apache FOP. This means we can do the same fibonacci example also using FO. Tak a look:

companyCode: 101	search:	agencyId: QGRAD

This was just very simple. For details options of FO xml see http://xmlgraphics.apache.org/fop
